

654 GO terms clustered by 'binary_cut'

immune transduction process organization organismal
dosage intracellular signal neuromuscular multicellular wounding
macromolecule cellular biological projection compensation

regulation positive coagulation

hyperosmotic chemical acid amino nerve growth organic
radiation substance stress heat endogenous uv

response cellular stimulus

reticulum
pole cholesterol organelle movement endocytosis lysosome
chromosome absorption endoplasmic lipid endosome
transport establishment towards intestinal golgi

localization vesiclemediated

meiosis maintenance cycle component establishment
chromosome elongation polarity sister chromatid
midzone nuclear cytoskeleton

segregation mitotic division

organization spindle

nucleoside sulfate triphosphate compound modification
ribonucleotide chondroitin nucleotidesugar
biosynthetic phosphorylation

ribonucleoside metabolic

pyrimidine process

epithelium vessel structure mesodermal layer
germ developmental branching organism
reproduction organismal postembryonic
generation gamete tube organ
morphogenesis animal
development
multicellular
