

500 GO terms clustered by 'kmeans'

specification neuron
commitment determination eye maintenance
fate neuroblast stem cell

embryonic differentiation formation ectodermal
morphogenesis tract cell fate
endodermal digestive

positive growth
multicellular behavior organ
organismal regulation

morphogenesis neuron system
differentiation cell nervous development
developmental positive
regulation

elongation membrane
maintenance spindle establishment
invagination polarity cytoskeleton

vesicle sterol golgi
microtubule nucleus export lipid intracellular
transport localization

cell nitricoxide disc forebrain
otic epithelium differentiation stem
development placode

strand spliceosome
methylguanosine transesterification
mrna capping rna
splicing elongation

phase mitotic regulation positive gm
cycle transition cell gs

macromolecule
process replication modification translation cellular
positive regulation metabolic

negative
histone serinethreonine modification kinase
regulation acetylation

positive
immune canonical wnt kinase external cascade
signaling pathway regulation

transport cellular
endocytosis along microtubule vesicle
regulation localization

component microtubule
nucleation projection cytoskeleton organelle
regulation polymerization actin
organization

synaptic
junction assembly growth organization projection
neuromuscular endocytosis
positive regulation
