

# 1824 GO terms clustered by 'binary\_cut'

dnatemplated  
cellular stressactivated compound macromolecule expression  
nucleoside nucleobasecontaining modification cascade small  
positive ubiquitindependent proteasomal negative purine

**regulation** process metabolic

system gamete oocyte  
embryo symmetry neuron anteriorposterior characteristics  
animal specification anatomical axis structure  
developmental organ differentiation behavior

morphogenesis multicellular  
**development**

microtubule proteindna  
projection segregation proteincontaining organelle ribosome  
junction ribosomal change component ribonucleoprotein  
cytoskeleton assembly actin chromosome bounded

**organization** biogenesis subunit

abiotic oxygen  
organonitrogen hormone defense chemical organic radiation external  
compound levels decreased stress nutrient bacterium

**response** stimulus cellular

organelle vesicle  
regulated inorganic nucleus anion location targeting  
synaptic organic endocytosis cotranslational exocytosis  
establishment vesiclemediated transmembrane ion

**transport** localization

chemical calcium cellular ion  
**homeostasis** glucose cation
