

500 GO terms clustered by 'kmeans'

differentiation maintenance specification
commitment cell eye determination
fate neuroblast stem

development
ectodermal fate endodermal commitment
morphogenesis embryonic cell
digestive tract

growth
neuromuscular axon development junction
developmental projection neuron
positive regulation

morphogenesis cell formation
tube regulation fate specification epithelial
endodermal gastrulation

development cell fate differentiation negative
regulation developmental

disc forebrain nitricoxide
differentiation placode stem cell otic
development epithelium

hormone dna
response cellular stimulus

transesterification strand
histone rna methylguanosine
elongation mrna capping
splicing acetylation

vesicle sterol golgi
microtubule nucleus export lipid intracellular
transport localization

microtubule vesicle transport cellular
localization regulation along

phase mitotic regulation positive gm
cycle transition cell gs

membrane assembly
establishment elongation polarity maintenance
invagination cytoskeleton spindle

nucleation
organelle positive component proteincontaining
endocytosis polymerization clathrindependent
regulation organization

macromolecule modification translation
metabolic process kinase serinethreonine
positive regulation

positive growth
multicellular behavior organ
organismal regulation

growth kinase
regulation cascade canonical signal transduction
signaling pathway wnt

signaling proliferation
positive regulation immune
