

1976 GO terms clustered by 'binary_cut'

stressactivated
macromolecule projection organic transduction negative cycle
nucleobasecontaining cascade small modification compound
process cellular signaling organization

regulation positive metabolic

characteristics system male
anatomical axis symmetry anteriorposterior
behavior neuron differentiation animal specification
multicellular developmental oocyte gamete

morphogenesis organ structure
development

energy hydroxy organic cellular phosphorylation acid
oxidation electron glycosylation modification fatty respiration
derivative carbohydrate compound lipid chain

metabolic process

division microtubule proteindna
projection biogenesis organelle junction membrane chromosome
ribonucleoprotein segregation proteincontaining subunit
assembly invagination bounded cilium component

organization cytoskeleton

abiotic oxygen
hormone detoxification defense chemical organic stress external
compound levels substance nutrient bacterium organonitrogen

response stimulus cellular radiation

nucleus organic
exocytosis inorganic regulated congression golgi anion
metaphase carboxylic intracellular transmembrane location
establishment organelle vesicle vesiclemediated

transport localization

calcium cellular ion

homeostasis cation chemical
