# 500 GO terms clustered by 'kmeans'

vesicle sterol golgi
microtubule nucleus export lipid intracellular

microtubule vesicle transport cellular

disc forebrain nitricoxide
differentiation placode stem cell otic
stimulus

strand spliceosome
methylguanosine transesterification
rrna capping

negative
histone serinethreonine modification kinase

phase mitotic regulation positive gm

elongation membrane

organelle positive
proteincontaining nucleation clathrindependent
endocytosis polymerization

macromolecule
metabolic regulation modification regulation cellular

regulation positive
multicellular behavior

system cell process
immune growth proliferation epithelial

kinase stimulus signal transduction cascade

development
developmental differentiation growth cell

positive growth assembly

maintenance specification

commitment eye determination differentiation

endodermal cell commitment development
morphogenesis ectodermal fate

specification cell differentiation negative

tube development epithelial formation

differentiation cell negative fate

developmental regulation
